Introduction

Dentistry is an old medical profession and dentists have been attending to the patients who show up in their clinics with a diversity of problems ranging from tooth ache and wisdom tooth to tooth removal and artificial tooth replacement. The fact that most of us suffer from one or more of these teeth conditions sometime in our life makes the dentistry profession as a much sought service in society. However, the last two decades saw the diversification of this practice to include concepts that are not related to pain and teeth surgeries but to the cosmetic interventions which offer better looks and smile!
That's why we proposed making a dental clinic website.

OUR CLINIC WEBSITE

Our website is made of three primary components:
The user account page,
The admin account page,
The secretary account page.
Each has a different role which we'll discuss shortly.

The three main pages:
